Technical Innovation through Enterprise IT

Today's lean environment demands the need to do more with less. Areli's team of certified professionals work closely with clients to identify and implement the best possible solutions and processes to solve critical problems. We have a passion to maximize the productivity of our client organizations, ensuring they can sustain high levels of customer satisfaction with minimal resources.

Areli utilizes a combination of business subject matter experts and certified IT specialists to increase productivity and facilitate mission-critical objectives. We work to maximize efficiency by facilitating data-driven investment decisions based on extensive industry experience. This approach allows our clients to make optimal decisions with their investment budget.

Systems Integration	Client and Mobile Software Development
<p>Access to contextual, complete and meaningful information to make decisions can make or break your business strategy. Competing in the current world market requires fast decision making. Disparate data sources and manual data analysis impedes timelines to action.</p> <p>We help our clients streamline business processes and integrate data from disparate sources to enable accurate and responsive decision-making support. Areli experts in data and system integration will analyze your business and its needs to be successful. From this analysis, we recommend specific KPIs and data views that are critical to developing strategies for immediate action. When combined with the engineering and emerging technology expertise of our Client and Mobile Software Development, Areli's services and solutions will transform your organization into an informed and fast-acting enterprise.</p>	<p>Your business is unique, and your organization must be able to respond to your customer's needs immediately with accurate information. Managing a business with custom spreadsheets, data sets and reports to meet this demand is daunting.</p> <p>At Areli, our software and mobile application development team cares and understands what is important to you. Before we design, we become experts on your business processes and assess resources to ensure the best possible solution. We partner with critical stakeholders throughout the software development lifecycle, using Agile, Waterfall and other proven methods, to design, develop, test, deploy and maintain a software solution to fit your needs and inspire efficiency. Our rich user interfaces are intuitively designed to get you to the answers you need quickly and accurately.</p>

With over 50 years of combined industry experience, we are experts in providing our services to federal organizations. Allow us to schedule a briefing of our capabilities with you today, to explore examples of our work and discuss how we can begin to help your business.

Past Performance

Contract Number and Name: *GIS Real Property Baseline Reconciliation Analysis*
Customer Name and Location: *Office of the Assistant Chief of Staff for Installation Management (OACSIM) - Pentagon*

Utilizing Army HQ systems of record and corresponding databases, workflows, and business rules, as well as Army policies and regulations, Areli provides analysis and reporting of GIS and Real Property (RP) record baselines to recommend Army-wide policies and develop training materials to correct underlying problems and set Army installations on a path toward GIS-RP reconciliation analysis and policy compliance. Our skilled personnel are working to establish a baseline analysis of the level of inconsistent reporting between GIS and Headquarters Installation Information System (HQIIS), and to identify and prioritize RP assets benefiting the Army and Audit Readiness when assets are not consolidated in RP reporting. Additionally, Areli is analyzing existing GIS data for compliancy with SDSFIE and QAP as well as providing discrepancy reports of asset inconsistencies between GIS and HQIIS. Using this analysis, we are providing recommendations for RP policies and regulations to remove ambiguity and conflicting guidance. Areli is also developing training course materials from the baseline analysis and policy updates to assist installation RP and GIS Offices and users in understanding and applying the policies, capabilities, and standard practices to improve the accountability and accuracy of RP assets.

Contract Number and Name: *Headquarters Installation Information System (HQIIS)*
Customer Name and Location: *Office of the Assistant Chief of Staff for Installation Management (OACSIM) - Pentagon*

Areli provides management, technical, and analytical support of the HQIIS program, which includes maintaining an accurate consolidated repository of Army real property data, serving as the Army's data warehouse for real property and related data, providing Army-wide real property analytical and reporting capability, and serving as the Army system of record for sites and installations. Tasks include system and software management, data management and reconciliation, real property reporting, recurring deliverables, system interface (inbound and outbound) data transmissions, manual data load procedures, Business Enterprise Architecture (BEA) validation, Risk Management Framework (RMF) accreditation to include monitoring of internal controls within the Enterprise Mission Assurance Support Service (eMASS), Federal Information Security Management Act (FISMA) compliance, Information Assurance Vulnerability Management (IAVM), Federal Real Property Information Model (RPIM) compliance and updates, Real Property Categorization System (RPCS) updates, Plant Replacement Value (PRV) calculation and updates, HQIIS system deployment schedules, training sessions, working group meetings, user acceptance testing, web service configuration and validation business rules schemas, and McKinney-Bento Act coordination with HUD.

Contract Number and Name: *Business Operation & Integration Division Support Services*
Customer Name and Location: *Fort AP Hill Directorate of Public Works (DPW), Bowling Green VA*

Areli provided help desk, data entry, operations and analysis support in the areas of Production Management, Facilities Management Services, Warehouse Management Operations, and CADD Support. Areli leveraged our highly skilled business operations resources to effectively manage data in the General Funds Enterprise Business System (GFEBs). Operating in an environment of continuous process improvement, our analysts and technicians effectively integrated and utilized data to answer the critical data-driven production and operations questions that DPW leadership require for executing a successful program. We also developed CADD standards, organized and centralized CADD projects, created and updated CADD data, aided DPW Engineers in designing construction drawings and plans, and updated/created floorplans for inclusion in ePRISMS. Our efforts resulted in increased customer service and capacity to meet increasing demand with reduced resources while achieving cost savings, increased facility sustainment funding and accurate real-time performance data that gave leaders and key stakeholders a stronger operational picture for decisive decision support.

Contract Number and Name: *WAMC CADD Support*
Customer Name and Location: *Womack Army Medical Center (WAMC), Fort Bragg N C*

Areli provides skilled personnel to the WAMC Facilities Management Division (FMD) for CADD services including the analysis, organization, and processing of infrastructure project and maintenance related CADD data required for medical readiness. We support data analysis, mapping functionality, data editing, project planning, and troubleshooting required to address critical infrastructure and facility questions to successfully manage the WAMC FMD medical facilities. Additionally, Areli provides support to maintain the organization of an electronic folder structure within the FMD. Our personnel assist FMD CADD users with training and documentation for standardization best practices, software utilization, and assist with drawing use. To ensure requisite availability of CADD software and associated government-owned applications, Areli also assists the WAMC FMD and Information Management Division (IMD) with CADD system design and configuration.
